General Information:

Balloon Test for these renderings was completed Friday 6/27/2014
Bottom of Red 7" diameter balloon = 120' AGL
Top of proposed monotree Steel and Antennas = 120' AGL
Photographs were taken only when the inclination was reported as near vertical by an associate on site throughout the test.
Weather conditions were clear skies and calm to light winds.

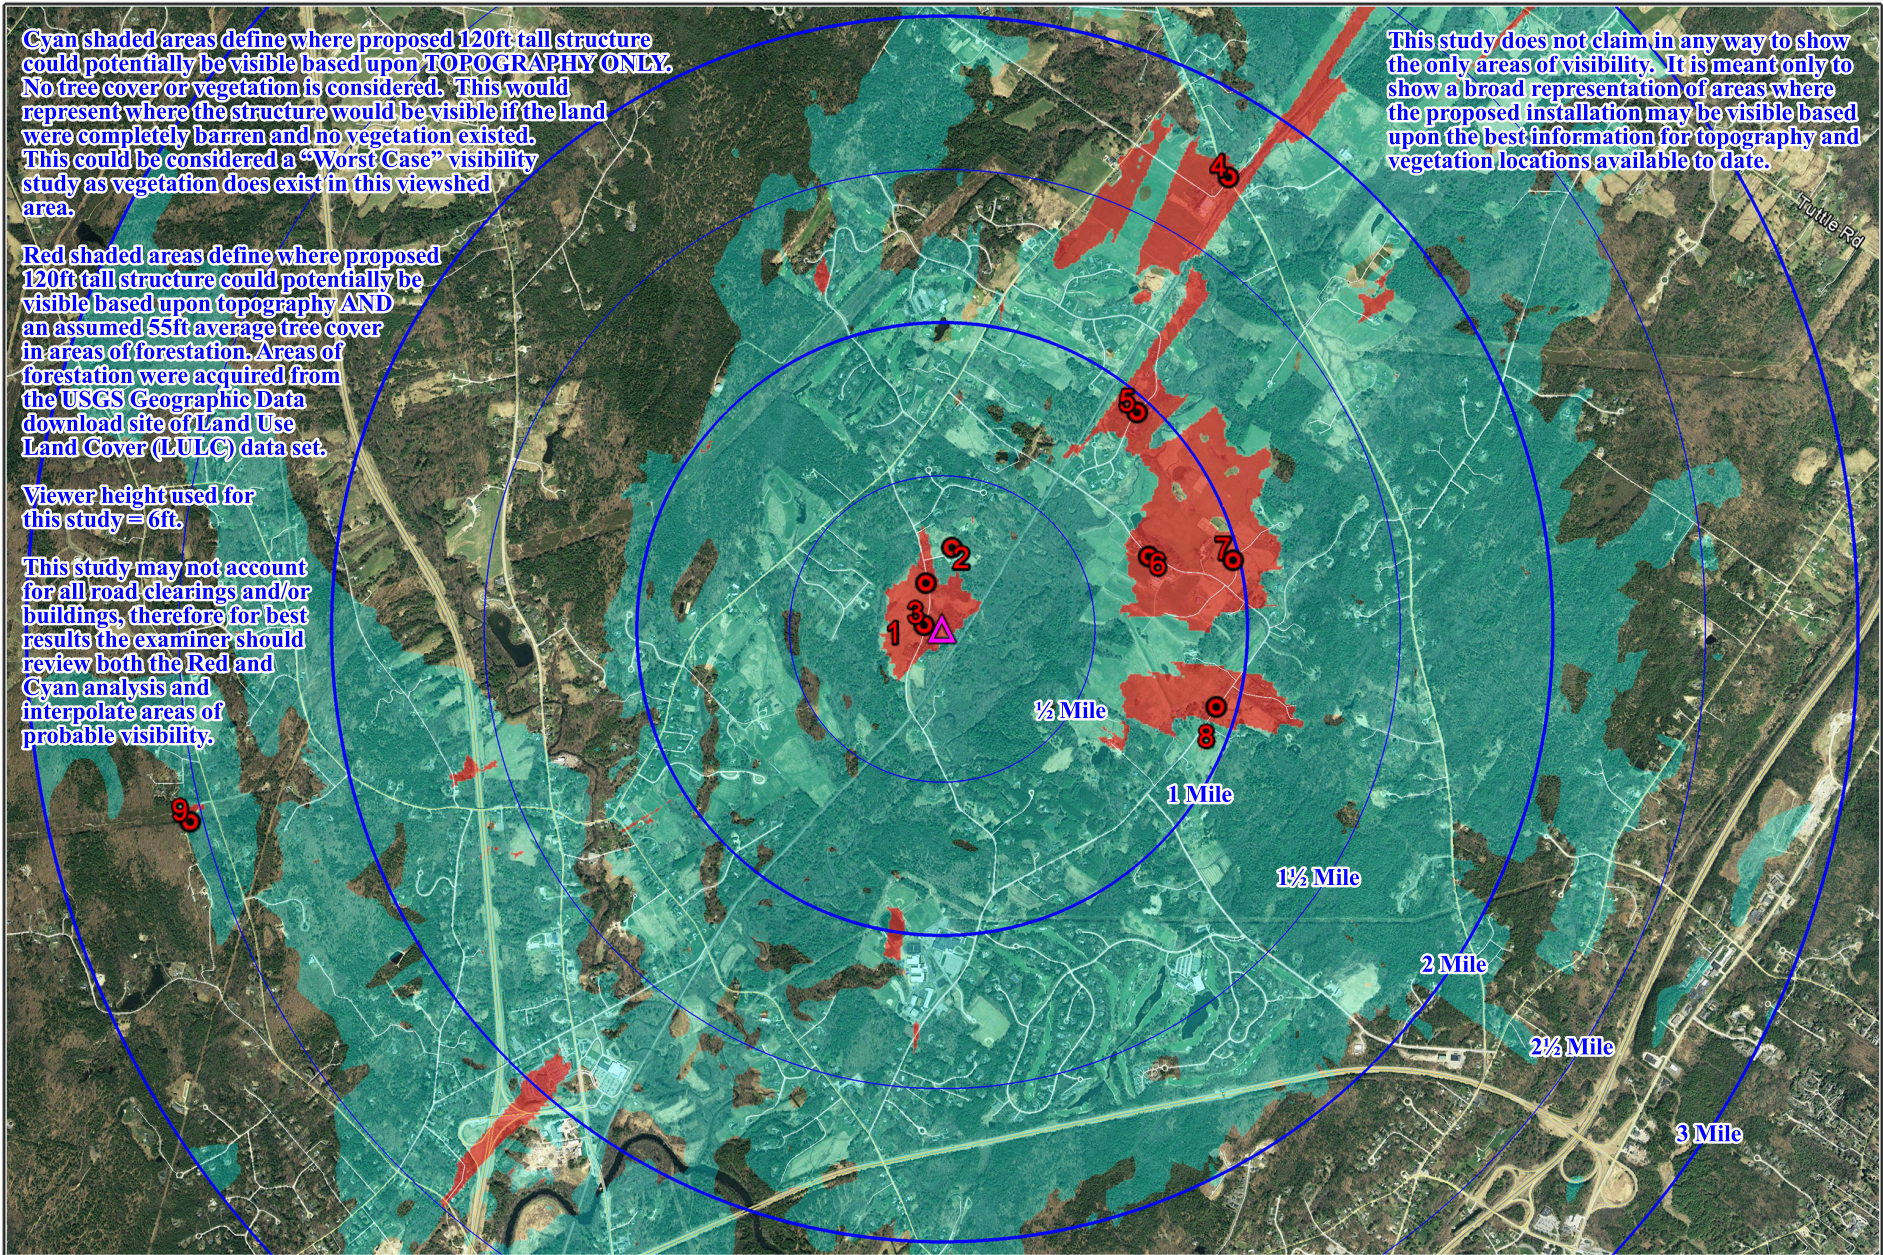

Caron & Associates Design is not involved in the ordering, purchasing or design of this site specific monotree and therefore cannot be held responsible for color, exact diameter, branch placement, branch quantity, or overall quality or visual aesthetics of the Monotree to be installed. "Monopine/Monotree" towers vary greatly from manufacturer to manufacturer.

For visual reference only. Actual visibility is dependent upon weather conditions, season, sunlight, and viewer location.

Cyan shaded areas define where proposed 120ft tall structure could potentially be visible based upon TOPOGRAPHY ONLY. No tree cover or vegetation is considered. This would represent where the structure would be visible if the land were completely barren and no vegetation existed. This could be considered a "Worst Case" visibility study as vegetation does exist in this viewshed area.

Red shaded areas define where proposed 120ft tall structure could potentially be visible based upon topography AND an assumed 55ft average tree cover in areas of forestation. Areas of forestation were acquired from the USGS Geographic Data download site of Land Use Land Cover (LULC) data set.

Viewer height used for this study = 6ft.

This study may not account for all road clearings and/or buildings, therefore for best results the examiner should review both the Red and Cyan analysis and interpolate areas of probable visibility.

This study does not claim in any way to show the only areas of visibility. It is meant only to show a broad representation of areas where the proposed installation may be visible based upon the best information for topography and vegetation locations available to date.

For visual reference only. Actual visibility is dependent upon weather conditions, season, sunlight, and viewer location.
