Re: Seaside Way Snow Plowing

Plowing Seaside Way without the eyebrow could take between 3 to 5 minutes depending on the amount of snow and whether the truck assigned can clear the paved surface with one pass in both directions. Plowing the eyebrow will at least double that time. This is due to the limited snow storage areas, the plow trucks inability to make the turn around the interior radius of the small island and the large pavement areas entering and exiting the eyebrow. This time could be absorbed into this plow route but adding additional time to a plow route limits that truck's ability to finish that route and move on to assist another larger route.
