

S. A. Burner Structural Summary of qualifications.

We are a limited service contracting company specializing in the revitalization of historic timber-frame structures.

Our services are limited to:

timber frame restoration

Sill, post, and beam replacement.

Leveling, truing and wind bracing of racked structures.

Granite or concrete foundations.

Excavating, site work, drainage and Hardscaping.

Consulting.

We have been in business for nearly four decades.

We are D.E.P. certified in erosion control to perform work in shore land areas.

Our current project is the revitalization of a Wells farmhouse that is circa 1740. Prior to this project we restored a sister structure (same builder) in the same neighborhood.

We have worked on several projects in coordination with Helen Watts Engineering

including the re-aligning and stabilization of a three story barn in Kennebunk.

When the Barn at Tidewater was damaged by the tractors falling through the floor we stabilized the structure and removed the tractors from under the debris.

We would be willing to consult with town planners and other concerned parties on strategies, feasibility and methods for preserving these structures.
